Before beginning your treatments, please review this important information.

1. GLOSSARY
(Note that terms in the glossary are bolded throughout this document.)
Aesthetic—cosmetic, related to beauty
Anaphylaxis—severe allergic reaction
Anesthetic—a substance that reduces sensitivity to pain
Angioedema—sudden swelling below the skin surface
Hyaluronic acid (HA)—a polysaccharide (sugar) that is naturally in the body. It keeps the skin moisturized and soft. HA fillers, including the JUVÉDERM® XC range of products, are a modified form of the HA that is naturally in your body
Hyaluronidase—an enzyme that breaks down hyaluronic acid
Inflammatory reaction—a localized response to injury, typically including pain, heat, redness, and swelling
Lidocaine—a synthetic compound used as a local anesthetic to decrease pain
Optimal—the best possible outcome
Pigmentation disorders—a lightening or darkening of an area of the skin
Repeat injection—an additional treatment with dermal filler that is given after the effects of the initial treatment have worn off, in order to maintain the desired result
Topical—cream or ointment applied to a certain area of the skin and affecting only the area to which it is applied
Touch-up—an additional injection of a small amount of dermal filler usually given about 2 weeks to 1 month after the initial injection. A touch-up treatment may be necessary to achieve the desired result

2. PRODUCT DESCRIPTION
What is it?
JUVÉDERM® Ultra XC injectable gel is a clear, colorless hyaluronic acid (HA) gel that contains a small quantity of local anesthetic (lidocaine). HA is a naturally occurring sugar found in the human body. The role of HA in the skin is to deliver nutrients and help the skin retain its natural moisture and softness. The lidocaine helps to improve the comfort of the injection.

How does it work?
JUVÉDERM® Ultra XC is a crystal-clear gel that is injected directly into and around the lips using a small needle to temporarily add the desired range of fullness for lip enhancement in adults over the age of 21. The lidocaine in the gel improves the comfort of the injection by reducing sensitivity to pain.

3. CONTRAINDICATIONS
Are there any reasons why I should not receive JUVÉDERM® Ultra XC injectable gel?
Your doctor will ask about your medical history to determine if JUVÉDERM® Ultra XC is right for you. You should not use JUVÉDERM® Ultra XC if:
- You have severe allergies, marked by a history of severe reactions (anaphylaxis) or history or presence of multiple severe allergies. Use may result in an allergic reaction.
- You are allergic to lidocaine or to the proteins used to make the HA in JUVÉDERM® Ultra XC (Gram-positive bacterial proteins). Use may result in an allergic reaction.

If you are not sure about your medical history concerning these allergies, please discuss with your doctor.

4. PRECAUTIONS
What precautions should my doctor advise me about?
The following are important treatment considerations for you to discuss with your doctor and understand in order to help avoid unsatisfactory results and complications.
- Minimize strenuous exercise and exposure to extreme sun or heat within the first 24 hours following treatment. Exposure to any of these may cause temporary redness, swelling, and/or itching at the injection site.
- Tell your doctor if you are using any medication that can prolong bleeding, such as aspirin, ibuprofen or other blood thinners. As with any injection, this may increase bruising or bleeding at the injection site.
- Tell your doctor if you are planning laser treatment, chemical peeling or any other procedure after treatment with JUVÉDERM® Ultra XC. There is a possible risk of an inflammatory reaction at the treatment site.
- Tell your doctor if you are on therapy used to decrease the body’s immune response. Use may result in an increased risk of infection.
- Tell your doctor if you are pregnant or breastfeeding. The safety for use during pregnancy, in breastfeeding females, or in patients under 18 years has not been studied.
- Tell your doctor if you have a history of excessive scarring (thick, hard scars). The safety of JUVÉDERM® Ultra XC injectable gel in patients with a history of excessive scarring has not been studied and may result in additional scars.
- Tell your doctor if you have a history of pigmentation disorders. The safety of JUVÉDERM® Ultra XC in patients with a history of pigmentation disorders has not been studied. Use in these patients may result in changes in pigmentation.

5. CLINICAL STUDY
How was the product studied?
The safety and effectiveness of JUVÉDERM® Ultra XC for improving lip fullness was studied in 208 subjects. To achieve subjects’ desired lip fullness results, a touch-up treatment was allowed 2 weeks to 1 month after their initial treatment. After 1 year, or after correction had been lost, whichever was first, subjects were offered a repeat injection. The amount of JUVÉDERM® Ultra XC used in the clinical study to achieve optimal outcomes ranged from 0.3 mL to 4.8 mL, with a median volume of 2.2 mL. In general, the amount of JUVÉDERM® Ultra XC used for the touch-up and repeat injection was less than the first treatment. For each subject, the volume used was based on the starting lip fullness and treatment goals.
To evaluate the safety of JUVÉDERM® Ultra XC, subjects noted common side effects in their daily diaries. Side effects were also reported by doctors based on office visits with each subject. These office visits included discussing any symptoms or complaints with the subjects, and assessing their appearance. To evaluate the effectiveness of the product for lip enhancement, a 5-point scale (ranging from 1 to 5) was used.

6. BENEFITS
What will it accomplish?
The results of the JUVÉDERM® Ultra XC clinical study showed that the product will temporarily improve lip fullness.
What did the clinical study show?
JUVÉDERM® Ultra XC was found to effectively increase lip fullness.
- 79% of subjects had at least a 1-point improvement in lip fullness 3 months after treatment
- 56% of subjects had at least a 1-point improvement in lip fullness 1 year after treatment
- 82% of subjects at 3 months reported that their treatment goals were met
- More than 75% of subjects reported an improvement in their overall satisfaction with the look and feel of their lips at 1 year after their last treatment
- The majority of subjects reported improvement in the softness, smoothness, and natural look and feel of their lips and mouth through 1 year
The clinical study showed that JUVÉDERM® Ultra XC lasts up to 1 year in the majority of subjects.

7. RISKS
What side effects were seen in the clinical study?
Subjects reported side effects in 30-day daily diaries. If these side effects lasted longer than 30 days, they were reported as adverse events. Adverse events could also be reported by doctors at any time throughout the study.

(Continued on reverse side.)
Subjects in the clinical study experienced swelling, bruising, firmness, lumps/bumps, tenderness, redness, pain, discoloration, itching, and peeling at the injection site, as reported in their 30-day daily diary. These side effects were usually mild (causing little discomfort and no effect on daily activities) or moderate (causing some discomfort and some effect on daily activities) in severity, although some subjects experienced severe side effects (causing great discomfort and effect on daily activities). Most of these side effects lasted 14 days or less and went away on their own. Occasionally, some subjects experienced side effects that lasted longer than 14 days. Based on the clinical study, the likelihood of experiencing side effects after treatment with JUVÉDERM® Ultra XC is shown below in Table 1.

*Occurring in >5% of subjects

*Based on 193 subjects who provided information about side effects after their initial treatment

### What adverse events were seen in the clinical study?

Adverse events (any side effects to JUVÉDERM® Ultra XC that lasted longer than the 30-day daily diary, or adverse events reported by doctors at any time throughout the study) were reported over the course of the study. The most common adverse events were the same as those reported as side effects in the daily diary, such as lumps/bumps, firmness, and discoloration.

In the clinical study, 4 subjects had 11 severe (great discomfort affecting daily activities) adverse events. These events included angioedema, swelling, bruising, lumps/bumps, redness, pain, and wrinkling. All of these events resolved within 1 month without any long-term effects. Medical treatment was needed in some cases.

### What are other possible adverse events?

As with all skin-injection procedures, there is a risk of infection. One of the risks with using this product is unintentional injection into a blood vessel. The chances of this happening are very small, but if it does happen, the complications can be serious, and may be permanent. These complications, which have been reported for facial injections, can include vision abnormalities, blindness, stroke, temporary scabs, or permanent scarring of the skin.

Although most side effects or adverse events will resolve within 2 weeks, some side effects or adverse events may persist longer than 30 days. Your doctor may choose to treat them with medications, such as antibiotics, steroids, or Hyaluronidase (an enzyme that breaks down and dissolves HA).

### 8. BEFORE PROCEDURE INFORMATION

**What happens in the office before the injection?**

Note that each doctor may have a unique process for assessing and treating patients. The following is an example of what you would likely experience with a typical procedure. Before the injection procedure your doctor will ask you questions about your medical history, as well as your treatment goals. Your doctor will discuss whether JUVÉDERM® Ultra XC is right for you and review what to expect during and after treatment, including possible side effects. Your doctor will also examine your skin and/or lips in and around the treatment area, and may take photos. Different options for pain management will be discussed, and if pretreatment numbing is desired, a topical such as lidocaine cream, or other anesthetic agent may be used. The treatment area will be cleaned and then prepared with alcohol or other antiseptic solution. Your doctor may use a pen to mark your face, identifying the planned areas of injection.
