* In a survey of 14,584 aesthetically aware male and female respondents aged 21-75 (21-65 in the US) in 18 countries.

† Based on a study of 131 adult patients who received multiple microdepot injections of Skin Quality Injectable in the intradermal layer. Cheek skin hydration was measured at a depth of 0.5 mm and 1.5 mm by the MoistureMeterD[®] instrument at Months 1, 4, 6 and 9.

‡ Study conducted with Skin Quality Injectable B (without lidocaine).

§ Skin quality is defined as smoothness (absence of fine lines), hydration and elasticity. Skin smoothness and elasticity results were not statistically significant at 9 months.

DEEP HYDRATION*† FOR SMOOTH AND FIRM SKIN

Skin quality injectable is made with a synthetic hyaluronic acid, which **binds to the water under your skin and increases hydration.**

This **deep hydration*†** can improve **elasticity, smoothness and the appearance of fine lines.†**

skin quality injectable also **contains lidocaine, an anaesthetic which can help reduce discomfort** during treatment.

You may experience some temporary side effects such as redness, swelling and tenderness after treatment, which tend to be mild or moderate. You should always consult a healthcare professional to help you decide if skin quality injectable is right for you and provide you with a full list of side effects.

* Based on a study of 131 adult patients who received multiple microdepot injections of Skin Quality Injectable in the intradermal layer. Cheek skin hydration was measured at a depth of 0.5 mm and 1.5 mm by the MoistureMeterD[®] instrument at Months 1, 4, 6 and 9.

† Study conducted with Skin Quality Injectable B (without lidocaine).

SKIN QUALITY INJECTABLE CAN LAST UPTO 9 MONTHS

With Skin Quality Injectable, you may only need **1 treatment*†** in your face to experience skin hydration^{†,‡} that can last for up to 9 months.[†]

90%

90% of patients were satisfied[§] with the appearance of their skin 1 month after treatment.†

“My skin felt plumper, a little bit brighter and just generally fresher.”
Elena, 39

* After a single treatment in a clinical study, which included initial (n=131) and top-up administered at Day 30 (n=31).

† Study conducted with Skin Quality Injectable B (without lidocaine).
