BEAUTIFUL & CONFIDENT YOU

Long hours of work, lack of sleep, no time for personal care – these are all factors that gradually wear down one's energy and looks, making you look older than you really are.

Feeling good about your appearance empowers you to live with optimism, courage and satisfaction.

Regain confidence and let your beauty shine.

How Wrinkle Treatment Works

Skin loses collagen, elastin and hyaluronic acid as it ages, leading to formation of wrinkles with repeated facial expressions that involve muscle contractions, such as smiling, laughing or frowning. If left untreated, static wrinkles will form over time.¹³⁻¹⁴

Dynamic Wrinkles

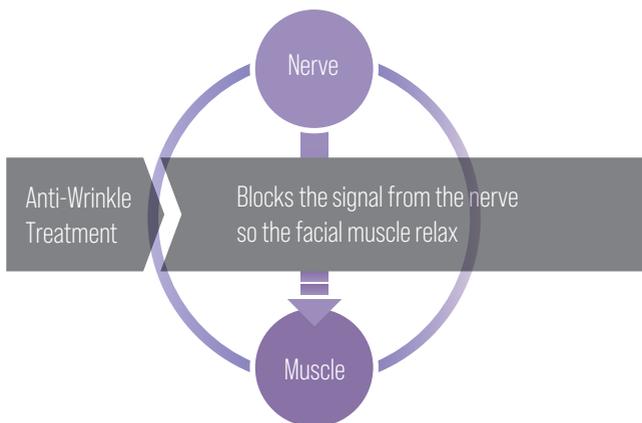

Dynamic wrinkles are seen in younger skin that springs back to its initial position after facial expressions¹³⁻¹⁴

Static Wrinkles

Static wrinkles remain present at rest, usually in older skin with less elasticity and volume¹³⁻¹⁴

When Anti-Wrinkle Treatment is administered in a few tiny injections, it blocks the nerve cells that cause these muscle contractions^{12,3} thus smoothing facial lines and preventing new lines from forming.

Look Younger With Anti-Wrinkle Treatment

After consultation with a fully-trained physician, treatment with Anti-Wrinkle Treatment consists of a simple 10-minute procedure. Anti-Wrinkle Treatment greatly rejuvenates the appearances of patients within days of the treatment.⁴

The patient was treated with Anti-Wrinkle Treatment. Forehead lines:20 units, Crows Feet:24 units, Glabellar Lines:20 units

most strikingly, studies have shown that patients who continue to treat their lines with Anti-Wrinkle Treatment regularly are shown to look younger over time^{9,10}.

In addition, efficacy and patient satisfaction are also higher when crow's feet and glabella lines are treated together.^{11,12}

Disclaimer:

Response to treatment may vary between patients.

Frequently-Asked-Questions About Anti-Wrinkle Treatment

1. Is Anti-Wrinkle Treatment safe?
The safety of Anti-Wrinkle Treatment is well established with 30 years of clinical use,^{5,6}
2. Does Anti-Wrinkle Treatment give an unnatural frozen look?
Anti-Wrinkle Treatment produces natural results that last up to four months when treated by a fully-trained doctor. When injected with the right dose in the right muscles, patients are able to express themselves naturally,⁷ resulting in high satisfaction rates.
3. Does Anti-Wrinkle Treatment make me look older once treatment is stopped?
No. Anti-Wrinkle Treatment produces a localized effect and relaxes the muscles temporarily so that they no longer tense up and cause wrinkles⁸. If you discontinue treatment, the treated muscle will gradually return to normal activity⁹. The perception of an aged appearance when treatment is discontinued is due to patients being accustomed to the youthful effects of Anti-Wrinkle Treatment
